

# USB Multi Panic Button

Initiate immediate, discreet, one-touch incident reporting or system activation

## Integrate USB Multi Panic Button Alerts With:

- The Alert Beacon®
- Alertus Desktop™ Notification
- LED Marquee Signage
- Text-to-Speech Interface
- Fire Alarm Panel Interface
- VoIP Phone Alerting
- Digital Signage Override

The USB Multi Panic Button is a versatile device that allows individuals to request help and/or enable system activation in an emergency. A hardware extension of the software-based Alertus Desktop Client, the USB Multi Panic Button features eight buttons that distribute scenario-specific notifications that can be configured on the Alertus Server. The device offers a sleek and low-profile design that can be mounted or placed inconspicuously on desks or in other areas.

## The Alertus USB Multi Panic Button Supports:

Intelligent, discreet incident reporting to designated recipient(s)

Scalable end-user solution for requesting help

A range of custom event triggers

Alertus System activation capability

## Features

- Connects to your network via a USB port
- Connects to PC running the Alertus Desktop Client
- Fully supervised, with connectivity monitored and reported in the software, including visual confirmation on the control
- Works when PC is locked
